## What is Lorazepam and why is it used?

Lorazepam is a medication that belongs to a class of drugs known as benzodiazepines. It is commonly prescribed to treat anxiety disorders, insomnia, and seizures. Lorazepam works by enhancing the effects of a neurotransmitter in the brain called gamma-aminobutyric acid (GABA), which helps to calm the central nervous system and reduce anxiety and other symptoms. It is important to note that Lorazepam should only be used under the supervision of a healthcare professional, as it can be habit-forming and may cause side effects if not taken as directed.
